

Bank OCR review platform

A lightweight FastAPI pipeline couples image quality checks, OCR normalization, field parsing and rule-based review.

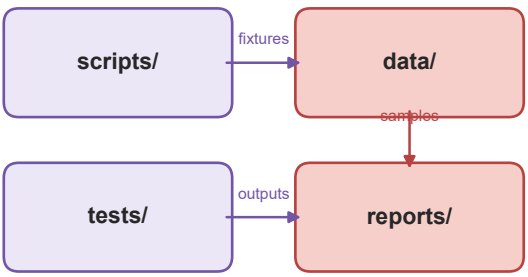

a Runtime review pipeline

Uploaded document images are converted into quality metrics, OCR text, structured fields and a review decision.

b Data, diagnostics and tests

Synthetic fixtures and test reports define the review surface without storing real customer documents.

Current quality-data mismatch

normal images exceed the glare pixel-ratio threshold; bright images remain below the current >210 bright threshold.

c Decision semantics
